

TREE PLANTATION

Without oxygen, we cannot live for a moment even. Without oxygen, the animal world will die away. While inhaling air we take the oxygen into our bodies to live.

Carbon dioxide, which we exhale, makes our atmosphere or rather our environment poisonous for us. Trees consume carbon dioxide and thereby make our environment safe for us.

Trees also give us many other benefits. We get fruit and flowers from the trees. Trees provide us with fuel and wood. In summer, they bear the scorching heat of the sun and give us cool shade under them. Trees in our forests draw the rain from the clouds floating in the sky. Trees in our forests check the quick flow of rain-water and thereby check the occurrence of high flood in our rivers. On the other hand, this slow process of water-flow gives us good water throughout the year through streams and streamlets with their sweet melodious music.

Trees conserve our soil. This soil-conservation is very important for our corn-fields. Trees make their land fertile by their fallen leaves. By their fallen leaves they make new soil for us. Most of the forest-products are the products from the trees in the forests, the absence of trees will cause a lot of harm to us and our life. So, the number of trees should be multiplied by the tree-plantation by us.

We should plant trees near our houses and near our villages for forestation to raise new forests. We should plant trees on the two sides of the roads and paths and the four sides of our corn-fields. We should plant trees in all the vacant places in our village in the towns where we live, and we should advise all to do so.

“Un-till you dig a hole, you plant a tree, you water It and make it survive, you haven’t done a thing. You are just talking.”

Time for tree-plantation:

Generally, the rainy season is the best time for tree plantation. Most of the tree-plants thrive well in the rainy season. Till then, we should seek advice from the Government agricultural experts about the appropriate time for the plantation of a particular kind of tree.

After-care:

Only planting trees is not enough. Because, planted trees may be destroyed by animals or otherwise, or may die for regular service of water. So we should be particular about the after-care of the planted trees. We should be very careful about the newly-planted trees.

Conclusion:

Trees should be regularly planted to save mankind and the animal world. Tree plantation and its after-care is a pleasing work too. We can get much pleasure in planting trees and in taking care of them. Students should plant trees in their school-compounds and the front-yards, backyards, and side-yards of their schools and near their own houses and in other places wherever possible.

They should explain to their neighbours the goodness of tree-plantation and encourage them to plant and care for new trees.
