

NATIONAL EDUCATION POLICY 2016

Our Nation is in dire need of an Education policy that would transform the whole educational system into a World class one. I am a person who is keen to work on developing a full proof educational system that would make our country Global power house in education. We should create Quality System that will ensure the outputs of student at each level meet Intellectual and Skill Quotient. In an overall view the whole of educational system needs to be divided into five learning systems

1. Child Education(from Age of 3 to 9)
2. Teen Education(from age of 10 to 18)
3. Youth Education(Age group of 19-25)
4. Matured Education(Age group of 26-50)
5. Adult Education(Age group of 51- 80)

Child Education

This is the early stage of learning for a child and at this stage they tend to be fresh in grasping things and reproducing it. So it is this stage that we need to inculcate moral principles and cultural values into their character and this is very vital in shaping their personality. So curriculum must imbibe on these course ware to shape up a child's attitude towards various virtues and values. The child brain should not be constrained with any syllabus and must be given ample time to interact with the environment through plays and games just like how the "Gurukul" education system in our ancient past had an effect on the learning system. So it is at this tender age that they should create a bondage with nature. The tutors have less impact and is limited to inculcating good values in them.

Teen Education

This is the best age of developing out of box thinking and to try different ideas. In this age we should extract the core quality that determines their "karma padh". The tutors have a great impact on the students in developing a free thinking habit and in not restricting their thoughts to the periphery of a syllabus or course. The intellectual level of the student to be respected and the student with higher intellectual level to be elevated to a higher strata as the potential is on an increasing mode which needs to be rewarded. The other students need to be motivated to climb up with the aid of hard work as it can help them in working on par with intellectualness. The best area which would suit the student is identified and given direction for the future learning.

Youth Education

This is the stage of life where the students tend to design their future. They embark on the path to excellence in the area that suits them the most and the core area to be identified the system which could bring the BEST Engineer or doctor or scientist or a Writer rather than generating an Engineering graduate. So their brain needs to be harnessed for the development of nation by supporting them with all necessary aids like scholarship and financial assistance. They tend to finish of the design for a creation in this stage and for doing it in an impeccable manner the role of Faculty is very important. The knowledge depth and the art of imparting ideas by faculty solely depends on the capability of faculty. If the faculty is a failure no doubt the student can be a failure so the Quality of Tutor entrusted with this job needs to be confirmed.

Matured Education

This is the stage when the design starts maturing into a form that can be best explained as Creativity. The whole of education system through which we passed through is tested at this stage. We should be capable of generating world class products or ideas which should make our nation economically and strategically strong. We should be Manufacturing and producing Unique things whose IPR should fetch Billions and this stage is supported by comprehensive research and simultaneous interaction with the industry. The inclusive system of education is preferred where the Teen education system and Matured education system constantly interacts with each other.

Adult Education

This is the time of imparting the learning to other systems and empowering the old age people with their access to IT and latest technology. The people who get catapulted from the matured education can play the role of tutors for adult education and this is significant in bringing uniformity at all the levels of learning. The old people are given an opportunity to continue contributing towards the progress of nation by involving in the developmental activities by sharing their views with other strata through various ICT aids. Creativity should be appreciated and encouraged at all levels.
