

Right Cultivation through Right Education

Education is the most significant tool in framing the society. And this framing may be compared to farming. Farming involves few basic steps:

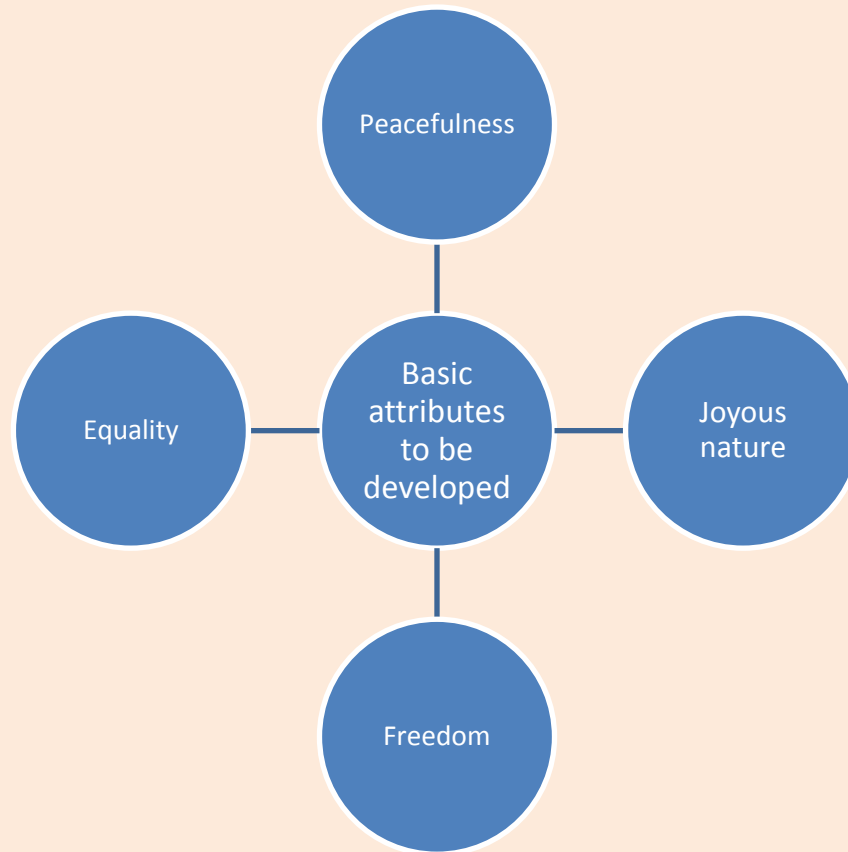

Crop Selection

The crop we intend to reap is good and content human beings working responsibly for the welfare of the society.

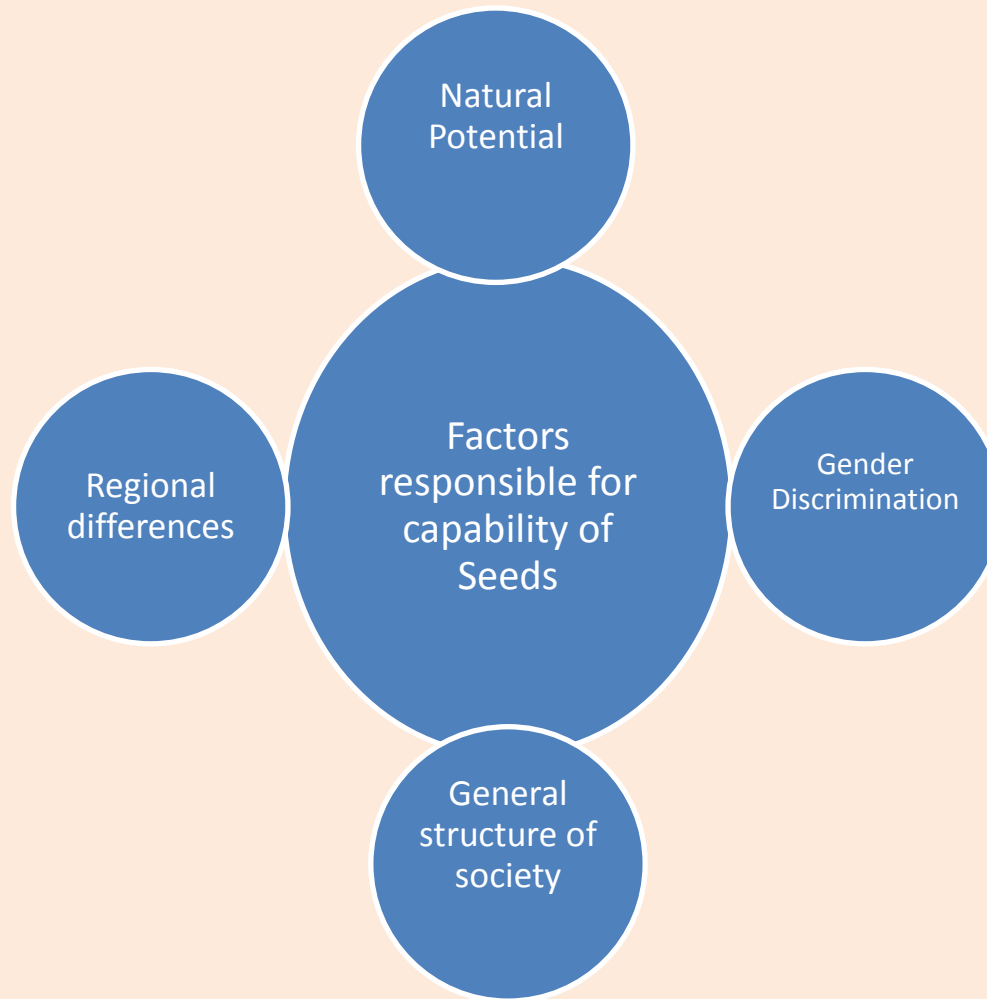

Land Preparation

This is the biggest challenge we face. The challenge is not that the land is barren, but that the quality of the land is so varied in nature. So, utmost care needs to be taken in preparing it for cultivation.

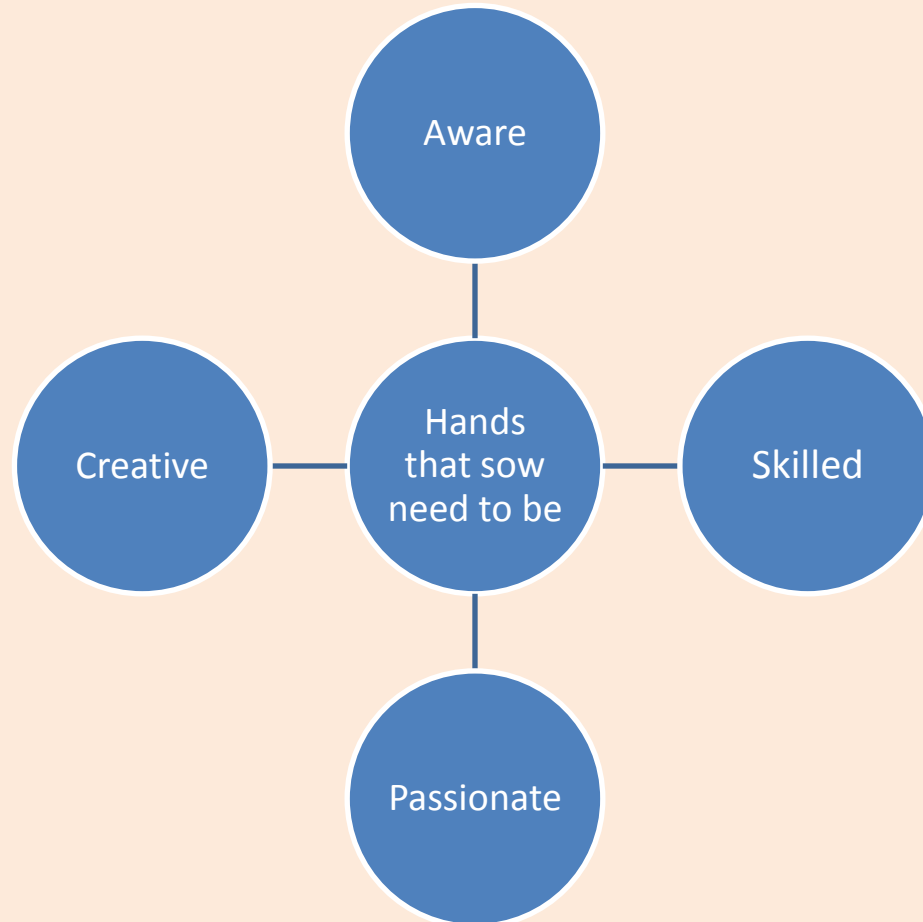

Seed Selection

In Bhaarata, there is no single seed that's non-productive. And this is no exaggeration. The natural potential of every seed needs to be discovered and identified.

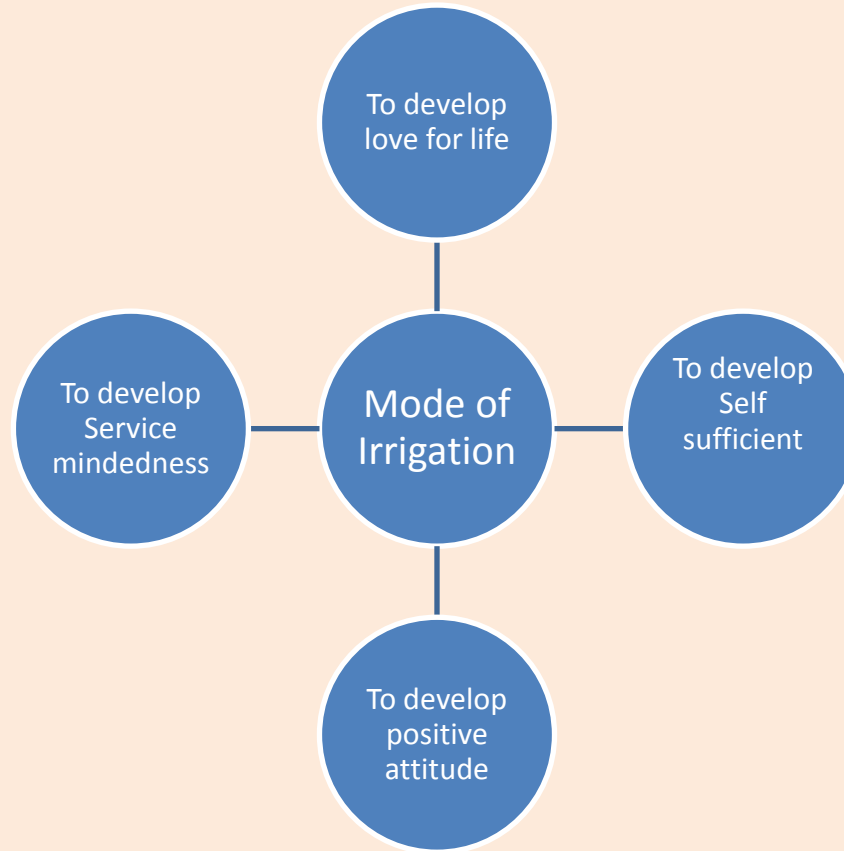

Seed sowing

The hands that sow the seeds have to best equipped to yield the best crop.

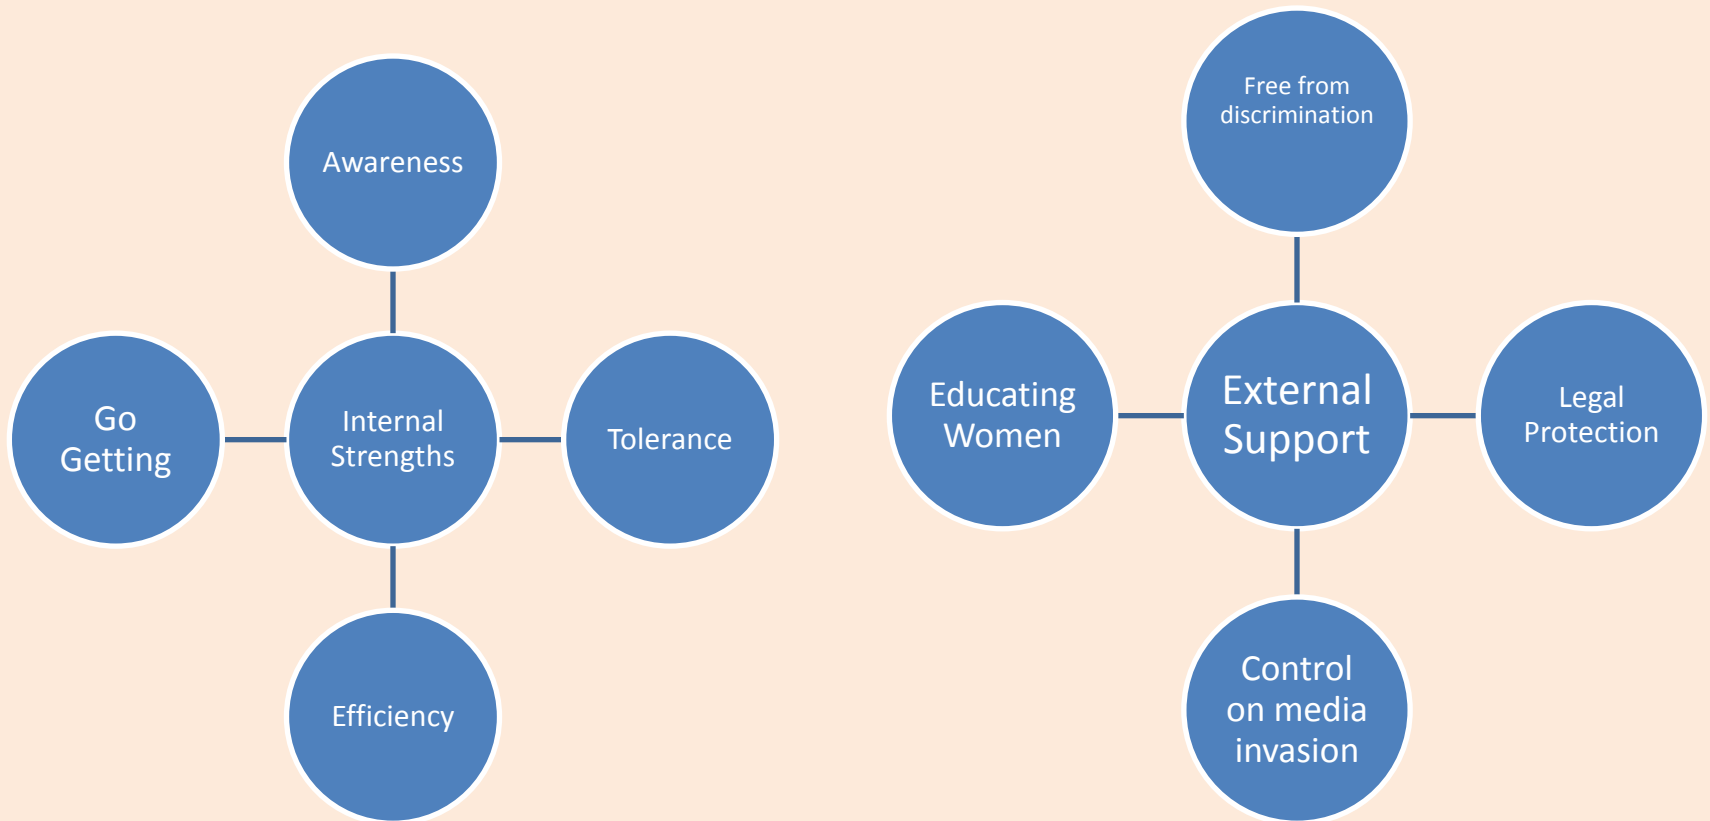

Irrigation

Providing best irrigation so that every seed acquires life and sustains life.

Crop Growth

Along with proper irrigation, providing necessary natural support like right amount of light, heat, nutrition and external support like protection from pests and protection is of utmost importance.

Harvesting

And now who can stop us from harvesting the crop we dreamt of !!!

Educationist, eager and capable of
contributing positively for Educational
reforms to transform Bhaarat into a
Jagadguru!!!
