

Transformation of birth and death registration system

Ways to get exact information

- Whenever a child birth or a death takes place gram Pradhan or respective local body should be aware of it and within 2 to 3 months gram Pradhan should collect the information(whose son or daughter it is/family info) and report it to tehsil(under the observation of DM) and DM should have a committee who will observe whether the information given by gram Pradhan is correct or not(it should be validated within 15 days). If correct allow Pradhan to generate or issue it from the respective department and update it to aadhar no.
- If we failed in first step for birth, during the pulse polio we can ask there to present birth certificate or we can tell them to generate it (or contact your Pradhan). A detail documentation should have the person who is giving polio drops (just make a tick mark which show this child has birth certificate).
- For the death Pradhan should be aware of it & report it within a week in DM office, and in the school we can tell the students whenever these two things happened report it to your class monitor and subsequently he can report to the teacher. And in our school there will be information of it. DM committee and Pradhan should also visit the school in the occasion of national day or any other according to their convenience and ask them to show the register(they can get raw information) .
- There should be penalty if Pradhan doesn't found active in first place.(Deduct his budget by the help of DM committee).
- For below poverty person whenever they come for Rashaan /cereals which government provide at low cost distributor should have finger scan machine which should be connected to aadhar machine which show this person got cereals.

- And last but most important to curb the population growth for this, government should promote the people having one child.
