

- **Railway Staff Multipurpose Society**

Railway Staff Multipurpose Society was established on 30 March 2012. Its members are railway employees and retired railway employees. The main objective of which was to increase the cooperation of railway employees in the development of railways. The glorious history of 150 years of Indian Railways and the huge organization of 1100000 employees and daily operation of thousands of trains make Railways the lifeline of the country.

This railway has given many things along with safe travel to the countrymen, but today due to lack of funds, railway needs investment for its projects, modernization and infrastructure improvement, in such a time it becomes the responsibility of all of us railway employees. That we all co-operate in the interest of the Railways.

The purpose of creating a social organization is to prepare public cooperation to improve the condition of railways, with the hope and belief that you all will cooperate.

- **Electrical Vehicle Charging Station**

The organization believes that if the railway land which is lying vacant is given to the Railway employees to install **EV** station, then we will help United Nation Environment Program, Tata Power, and Railways to set up more and more electrical vehicle charging stations on this land. Together we will set up EV stations by encouraging all our colleagues as much as possible.

In the past, railway land was given to the railway employees under Grow More Food, if today according to the demand of the time we will be given railway land to install **EV** station, then not only the problem of pollution in the environment will be solved, but also the railway Income will increase. We will be able to co-operate more and more with the government in setting up the charging station. Our main objective is to help the Honourable Prime Minister, Power Minister and Road and Transport Minister to set up the charging station.

- **Our view**

1. We will encourage more and more railway employees to install **EV** station after the organization gets approval from the Railway boards.
2. Organization will arrange loan for **EV** station to railway employees from banks at low cost.
3. To achieve the objectives of the organization, it is committed to install **one lakh EV** station in the country in the next 5 years by co-ordinating with all, because the railway network is available everywhere in the country, so where the railway premises will be provided to us, we There will help people to install pollution free **EV** station as per government rules. With the installation of **EV** station 300,000 unemployed people across the country will get employment, and the environment will get a lot of benefit from it.
4. If one lakh EV stations are set up on the vacant land of the Railways and the estimated annual rent of ₹ 30,000 is also fixed, then the income of the Railways from 100,000 stations can be calculated.

## **Conclusion**

1. The organization will require permission from the Railway Administration to complete this work.
2. Permission should be given to build general store tea house around the charging station.
- 3 At present, due to the low number of electric vehicles, all the railway workers who set up charging stations will continue to earn.
- 4 It will be within the jurisdiction of the Railways that if ever it requires land, it can ask its employees to remove the EV station whenever it wants.
5. Retiring employees can get the best benefits from this scheme and they can give their services to the Railways by investing the amount retired by the Railways at the right place.
